

SalesGenie

Statement of Work

SalesGenie - Oak & Ember Interiors AI-Powered Sales Assistant

SOW No. SOW-2026-SG-001 · Effective Date: 31 Aug 2026 · v1.0 Final Signed off

Client:	Oak & Ember Interiors ("Client")
Service Provider:	Dipti Sankhe Pimple ("Consultant")
Engaging Function:	Software Development Org, under the sponsorship of the CTO
Governing Agreement:	This SOW is issued under, and incorporates by reference, the Master Services Agreement ("MSA") between the parties dated <i>31 Aug 2026</i> . Where no MSA exists, the parties agree this SOW constitutes the entire agreement for the engagement described herein.

Overview

1. Purpose & Background

Oak & Ember Interiors is undertaking a strategic digital transformation, investing in AI-powered sales agents to support end-to-end customer journeys. The Client's current sales lead intake process is manual: sales reps spend 2–3 hours/day reading and interpreting inbound inquiry emails, lead qualification is inconsistent across reps, product recommendations are made from memory rather than the live catalog, CRM logging lags reality, and weekly sales insights are compiled by hand.

This Statement of Work (“SOW”) engages Dipti Sankhe Pimple as AI PM/TPM Consultant to design, build, document, and pilot “SalesGenie,” a multi-agent AI system that qualifies inbound leads, generates catalog-grounded product recommendations, and produces automated weekly sales insights, as further described in Section 2.

2. Scope of Work

2.1 In Scope

- Discovery and requirements definition for the sales lead-intake workflow (Product Requirements Document - SalesGenie_PRD_Oak_and_EMBER_Dipti_Sankhe_Pimple).

- Design of a multi-agent architecture and orchestration pattern (Router/Dispatcher + Sequential Pipeline) and accompanying Technical Design Document, including grounding rules, technology stack, and cost/evaluation strategy.
- Implementation of the SalesGenie workflow(s) in a low-code orchestration platform (n8n), covering: Email Ingestion, Lead Qualifier, Product Recommender (RAG-grounded against the product catalog), Response Drafter, CRM Formatter, and a separately-scheduled Weekly Aggregator.
- Supported language English.
- Implementation of a Human-in-the-Loop approval gate prior to any customer-facing communication.
- Integration with an observability/tracing tool (Langfuse) for at least the Router and Product Recommender agents, with a documented pattern for extending coverage to remaining agents.
- Execution of the agreed 11-case baseline test dataset (T1–T11) and documentation of results, including hallucination findings.
- Delivery of supporting project artifacts: architecture diagram, exported workflow JSON files, README/setup documentation.

2.2 Future Enhancements & Value-Add Opportunities (via CR)

Features that can enhance the system after the initial launch

- **Omnichannel Support:** Non-email channels (chat, phone, in-store/showroom capture)
- **Omnichannel AI Support:** Implemented an AI-powered Speech-to-Text bot across chat, phone, and in-store channels to automatically capture customer information 24/7 and generate email follow-ups.
- **24/7 AI-Driven Lead Capture:** Uses Speech-to-Text AI across chat, phone, and showrooms to automatically log customer details and trigger email workflows.
- **Automated Lead Follow-Up:** Triggers a calendar invitation or direct purchase link via an AI Agent immediately after a valid inquiry.
- System automatically sends a follow-up email containing either a calendar invitation or a direct purchase link.
- **Automated Campaign Delivery:** Batch scheduler triggers and sends the latest product catalogue directly to customers.
- **Spam and Phishing Mitigation:** All suspected spam and phishing emails are automatically logged and their sender addresses blocked. A human-in-the-loop (HITL) review process is then conducted on the generated Excel report to identify and unblock any legitimate addresses or potential clients.

2.3 Out of Scope

- Fully autonomous sending of customer-facing emails without human approval.
- Fine-tuning a custom model (documented as an optional future phase, not part of this engagement).
- **Language:** Multi-language support
- Live inventory system integration beyond the provided product catalog file.
- Ongoing managed hosting, monitoring, or support after the Acceptance Date defined in Section 6, unless separately contracted.

3. Deliverables

#	Deliverable	Format
D1	Singed Off Statement of work	Word/PDF
D2	Product Requirements Document (problem statement, ideation, stakeholders/benefits, requirements, success metrics, risks, rollout plan)	Word/PDF
D3	Technical Design Document (architecture & diagram, orchestration rationale, prompt/grounding rules, tech stack, evaluation & observability plan, baseline test results, cost analysis, reflection)	Word/PDF
D4	SalesGenie Main Pipeline workflow (Router, Ingestion, Qualifier, Recommender, Validator, HITL, Drafter, CRM Formatter)	n8n workflow (.json)
D5	SalesGenie Weekly Aggregator workflow	n8n workflow (.json)
D6	Setup README (credentials, environment variables, sheet schema, node-to-agent mapping, baseline test instructions)	Markdown (.md)
D7	Baseline test results for T1–T11, including documented hallucination findings	Included in Technical Design Document / trace exports
D8	Repository licensing files (LICENSE, NOTICE)	Text/Markdown
D9	Architecture diagram	PNG, embedded in Product Requirements Document / Technical Design Document

4. Roles & Responsibilities

4.1 Consultant Responsibilities

- Design, build, test, and document the SalesGenie system as described in Section 2.
- Configure and validate the n8n workflows against the baseline test dataset.
- Provide the Client with all deliverables in Section 3 and walk the Client's designated reviewer(s) through the design and results.
- Flag material risks, scope changes, or blockers promptly per the Change Management process.

4.2 Client Responsibilities

- Provide timely access to: the product catalog, sample inquiry emails, CRM export schema, and any credentials needed for Google Sheets, Gmail, and the chosen LLM/observability providers.
- Designate a single point of contact with authority to review and approve deliverables and rollout decisions.
- Provide sales rep availability for the Shadow and Pilot phases (Section 5) and timely feedback during review cycles.
- Own ongoing hosting, credential management, and data privacy compliance for the production environment once deployed.

- **Deferred Enhancements Section 2.2 (CR Required):** Value-add features identified for future phases, to be scoped and executed via a formal Change Request.

5. Timeline & Milestones

Phase	Description
Phase 0 — Discovery & Design	Requirements gathering, architecture, PRD & Technical Design Document
Phase 1 — Build & Baseline Testing	n8n workflow implementation, baseline dataset T1–T11 executed and documented
Phase 2 — Shadow Mode	SalesGenie runs in parallel with the manual process; no customer-facing output; accuracy measured against rep behavior
Phase 3 — Pilot	Live use with mandatory HITL approval; weekly accuracy/hallucination review
Phase 4 — Full Rollout	Org-wide rollout of qualification, recommendation, CRM auto-update, and weekly insights, with HITL retained
Phase 5 — Acceptance & Handover	Final acceptance review per Section 6 and knowledge transfer to Client's internal team

6. Acceptance Criteria

A deliverable is deemed accepted when it meets the criteria below, or 5 business days after delivery if the Client has not provided written objection, whichever is earlier.

1. Core capabilities (Lead Qualification, Product Recommendation, Weekly Sales Insights) operate end-to-end against a live test environment.
2. The system passes the 11-case baseline test dataset (T1–T11) as documented in the Technical Design Document, including the negative cases (spam, vague inquiry, product question, out-of-stock).
3. No product, price, or feature is presented to a customer that cannot be traced to an actual product catalog row (zero tolerance on the baseline set).
4. The Human-in-the-Loop approval gate is functioning — no customer-facing email sends without explicit rep approval.
5. At least one extended capability (Automated Follow-Up Drafting and/or CRM Auto-Update) is implemented end-to-end.
6. Observability is connected and demonstrable via Langfuse traces for at least the Router and Product Recommender agents.

7. Fees & Payment Terms

Fees are structured as fixed milestone payments tied to the phases in Section 5. Amounts below are placeholders pending commercial agreement between the parties and are not final until both signature blocks in Section 12 are executed.

Milestone	Trigger	Fee
M1	Acceptance of Phase 0 deliverables (D1, D2, D3, D8, D9)	
M2	Acceptance of Phase 1 deliverables (D3–D6)	
M3	Completion of Phase 2 Shadow Mode with documented accuracy results	
M4	Completion of Phase 3 Pilot with rep sign-off	
M5	Completion of Phase 4 Full Rollout and final acceptance (Phase 5)	
Total	—	

Invoices are payable within [30] days of the Client's written acceptance of the associated milestone. Amounts are exclusive of applicable taxes. Reasonable pre-approved expenses (e.g., third-party API usage during testing) are billed at cost with supporting receipts.

8. Change Management

Any change to the scope, deliverables, timeline, or fees described in this SOW must be documented in a written Change Order signed by both parties before the change takes effect. Verbal or email requests alone do not modify this SOW.

9. Assumptions & Dependencies

- The Client will supply the product catalog, sample inquiry emails, and CRM export schema in the formats referenced in the Technical Design Document.
- The Client will provision and own the underlying third-party accounts (OpenAPI/Anthropic/Claude API, Google Workspace, Langfuse, n8n hosting) and their associated costs; the Consultant does not warrant third-party service availability or pricing.
- Inbound inquiries are in English and arrive via email or a webhook-compatible channel.
- Any delay in Client-provided access, data, or feedback may result in a corresponding adjustment to the timeline in Section 5, coordinated per Section 8.

10. Confidentiality

Each party agrees to keep confidential any non-public business, technical, or customer information disclosed by the other party in connection with this SOW, and to use it solely to perform obligations under this SOW, for a period of [3 years] following the Effective Date, except as required by law. The product catalog, CRM data, and any real customer information the Client provides are Client Confidential Information regardless of marking.

12. Term & Termination

This SOW commences on the Effective Date and continues until all deliverables are accepted per Section 6 or until terminated earlier by either party with [15] days' written notice. Upon termination, the Client shall pay for all milestones accepted, or work-in-progress performed in good faith, up to the effective date of termination.

13. Signatures

By signing below, each party agrees to the terms of this Statement of Work as of the Effective Date.
